

Maximum interlocking position of the Half Tile over the Gable Rake

In order to apply Gable Rakes the roof requires previous planning.

The first piece to be layed is the Gable Rake right (marked with a "D") at the right edge of the roof, while the last one will be the Gable Rake left (marked with an "E") at the left edge of the roof.

Each Gable Rake has two pre-holes to simplify its fixation with screws and sealing nuts, avoiding the use of mortar.

Note 1: The measures presented are approximate values in "mm".

Nota 2: The average width of 4 Tecno roof tiles is 830 mm.
